

Environmental Lean Solutions Case Study

Environmental Lean Solutions is a unique consultancy committed to providing companies with the advice, training, support and tools necessary in today's economic and environmental climate to become world leaders in their sector.

Specialising in lean business transformations, lean consultancy, environmental consultancy (including carbon profiling), people development, due diligence and risk management, Environmental Lean Solutions also expects to be announcing the alignment of its MSc course offering with a leading Bristol university very shortly.

Established in 2005, the company strategically relocated to Queen Square, Bristol, in 2008 to house its rapidly growing team of consultants and in-house specialists. This new, prestigious city centre location places Environmental Lean Solutions right at the heart of a city whose ethos echoes its own – A clean future, without limits.

As Alan Bailey, Director of Environmental Lean Solutions and Chairman of Bristol Environmental Technology & Services Sector (BETS), says, **“Bristol is recognised as a hub for innovation and excellence in manufacturing and we expect to help the city position itself as the green collar capital of Europe, using unique people development programmes and driving world class business practice. “**

Alan and the Managing Director, Paul Albone, themselves educated in Bristol, were especially keen to draw on the strong talent pool Bristol attracts, both home grown and as a result of being such a desirable relocation destination. Going forward, the company is already planning to expand into additional city centre premises and is set to make a further considerable investment into the city through its sister project development company, ABS Renewables.
